

Ethical Reflection: Risks, Harm, and Mitigations

- **Risks & Potential Harm:**

- Financial Distress from Hallucinations: Providing inaccurate or outdated pricing to low-income youth who have no financial buffer. According to Nibud, 1 in 5 young adults face severe financial stress, and CBS data shows over 12% of youth in Den Haag live in low-income households. A hallucinated "free entry" claim could lead to unexpected fees, causing real-world stress or public embarrassment.
- Language Disparity: Non-Dutch speakers might receive lower-quality search results due to how local Dutch municipal sites index information, risking poorer service for migrant or international youth.

- **How We Limit It:**

- Strict Grounding Code: The Python logic automatically drops any activity or discount that lacks a live web search source link and date.
- Zero Memory Claims: The AI is strictly forbidden from stating prices or eligibility rules from its internal memory.
- Soft Eligibility Framing: All financial support options are framed as "*likely eligible, verify here*" with direct links to official sources, ensuring users confirm details on official provider websites before spending money.
