FUN FOR CHEAP • SDG 10.2

THE PROBLEM

Low-income young adults face social isolation because activities are unaffordable, while municipal discounts go unused due to a lack of awareness.

TARGET USER

Low-income young adults (ages 18–27) in The Netherlands who are struggling to socialize due to limitations on the budget.

WHY?

- 3.1%–3.6% of Dutch youth live below the poverty line, rising to over 12% in urban centers like Den Haag. *CBS (Youth Poverty)*
- 1 in 5 young adults (18–26) experience severe money stress; social activities are the first expenses cut. *Nibud (Financial Stress)*
- Many young people who could get support, such as municipal discount passes, never use it because they don't know it exists. *SCP (Armoede in kaart)*

WHAT WE BUILT

A **Streamlit app** built with Python the **Claude API** and **live web search**.

It finds **cheap** and *free* activities in **any Dutch city**.

Claude finds the information and **Python decides** what is shown.

FEATURES

Smart search › pick categories, city, max price per person, group size and dates

Budget-safe results › cards sorted cheapest first with date, price and group total.

Anything over budget, outdated or without a source link is dropped

Invite your crew › an AI-written invite with one-tap sharing

Passes that pay › find city passes and youth cards and get linked to official pages only

WHY SDG 10.2?

- **Removing Cost Barriers:** Directly enables lower-income youth to participate in community and social life.
- **Unlocks public support:** points users to existing passes (Ooievaarspas, CJP) with links to the official pages, turning unused support into real participation.

DEMO

Link!

ETHICAL CONCERNS

- **Made-up prices or "free entry"** → No source link, no listing.

Prices and dates are copied from the page, never guessed.

- **Wrong eligibility claims** → The app never says you qualify.

Only the official page decides.

- **Language gap** → Many sites are Dutch-only, so results in other languages can be weaker. We show only what's sourced and always link to the original page.

- **Cost abuse through the public link** → A monthly spending cap on the API.

THANK YOU
